The Agilent 3458A accuracy is specified as a part per million (ppm) of the reading plus a ppm of range for dcV, Ohms, and dcl. In acV and acI, the specifi- cation is percent of reading plus percent of range. Range means the name of the scale, e.g. 1 V, 10 V, etc.; range does not mean the full scale reading, e.g. 1.2 V, 12 V, etc.

Data Sheet
Intro HP 3458A instrument is really meant to be remotely controlled via GPIB interface, to use all it's capabilities. Front panel is not meant for easiest operation, and require decent amount of time invested into programming button scripts and subroutines to perform common tasks quickly.

The 3458A is an old instrument, and does NOT understand SCPI command language! Therefore, you have to omit the star character "*", the correct command is "ID?", not "**ID?". All control programs using SCPI will not operate on the 3458A, e.g. BenchVue. Btw.: The correct syntax is documented in the user manual, chapter 6, command reference, page 186!

xDevs.com Documentation
A given instrument may implement any or all of them. The earliest was the character (letter-digit) protocol used in the pre-HPIB digital interface. It was ported to HPIB and is still used to this day for instruments which require it. For example, the HP / Agilent 3458A 8½-digit DVM, which is current production, uses this protocol.
