Amplitude Modulation Tutorial Solutions

When somebody should go to the ebook stores, search start by shop, shelf by shelf, it is in reality problematic. This is why we offer the ebook compilations in this website. It will certainly ease you to see guide **amplitude modulation tutorial solutions** as you such as.

By searching the title, publisher, or authors of guide you essentially want, you can discover them rapidly. In the house, workplace, or perhaps in your method can be all best place within net connections. If you intention to download and install the amplitude modulation tutorial solutions, it is unconditionally easy then, past currently we extend the member to buy and make bargains to download and install amplitude modulation tutorial solutions hence simple!

Here, $f_{max} = f_c + f_m$ and $f_{min} = f_c - f_m$. Substitute, f_{max} and f_{min} values in bandwidth formula. $BW = f_c + f_m - (f_c - f_m) \Rightarrow BW = 2f_m$. Thus, it can be said that the bandwidth required for amplitude modulated wave is twice the frequency of the modulating signal.

The equation of amplitude wave is given by $s(t) = 20 \left[1 + 0.8 \cos \left(2\pi \times 10^3 t \right) \right] \cos \left(4\pi \times 10^5 t \right)$. Find the carrier power, the total sideband power, and the band width of AM wave. Solution. Given, the equation of Amplitude modulated wave is.

Calculations: (For $V_m = 2v$) $A_{max} = 650mV$. $A_{min} = 615mV$. Modulation Index ($\hat{\mu}$) = $(A_{max}-A_{min}) / (A_{max}+A_{min}) = 0.02767$. Since $\hat{\mu} < 1$, we can obtain the message signal after demodulation without any loss of information. (2) Demodulation using Envelope Detector.

carrier wave. This is further divided into amplitude and angle modulation. If the amplitude of the high frequency carrier wave is varied in accordance with the instantaneous amplitude of the modulating signal, then such a technique is called as Amplitude Modulation.

Amplitude of the carrier signal, $A_c=20V$
Frequency of the carrier signal, $f_c=4 \times 10^6 \text{ Hz}=4 \text{ MHz}$
Frequency of the message signal, $f_m=1 \times 10^3 \text{ Hz} = 1\text{KHz}$
Modulation index, $\beta=9$ Here, the value of modulation index is greater than one. Hence, it is Wide Band FM. We know the formula for modulation index as $\beta=\frac{\Delta f}{f_m}$

Quadrature amplitude modulation (QAM) requires changing the phase and amplitude of a carrier sine wave. One of the easiest ways to implement QAM with hardware is to generate and mix two sine waves that are 90 degrees out of phase with one another.
