Dynamic Vehicle Routing

Bellman-Held-Karp algorithm, is a dynamic programming algorithm proposed in 1962 independently by Bellman and by Held and Karp to solve the Traveling Salesman Problem (TSP). TSP is an extension of the Hamiltonian circuit problem. The problem can be described as: find a tour of  $N$  cities in a country (assuming all cities to

1. Introduction. Dynamic vibration absorber (DVA) is an auxiliary mass system attached to a vibrating primary system to reduce undesired vibration, which is widely used in the fields of civil and mechanical engineering for its simple design and high reliability .In the first DVA proposed by Frahm in 1909 ,
