What is Bioethics?

Ethics is a philosophical discipline pertaining to notions of good and bad, right and wrong—our moral life in community.

Bioethics is the application of ethics to the field of medicine and healthcare.

Ethicists and bioethicists ask relevant questions more than provide sure and certain answers.

What is bioethics

The four principles are:

Respect for autonomy
- the patient has the right to refuse or choose their treatment.

Beneficence - a practitioner should act in the best interest of the patient. Non-maleficence - to not be the cause of harm.

Also, "Utility" - to promote more good than harm
Justice - ...

Abstract The four principles approach to medical ethics plus specification is used in this paper.

Specification is defined as a process of reducing the indeterminateness of general norms to give them increased action guiding capacity, while retaining the moral commitments in the original norm.
