Cells, gels and mechanics. G. H. Pollack. Department of Bioengineering, University of Washington, USA. Abstract. The cell is a gel. Yet, gel-like features of the cytoplasm have hardly been exploited for engineering design. If the cell is a gel, then a logical approach to the understanding of cell function may be through an understanding of gel function.

The electrolyte in a gel cell has a silica additive that causes it to set up or stiffen. The recharge voltage on this type of cell is lower than the other styles of lead acid battery. This is probably the most sensitive cell in terms of adverse reactions to over-voltage charging. Gel Batteries are best used in VERY DEEP cycle application and ...
