### **Human Factors in Aviation: Edition 2 by Eduardo Salas, Dan ...**

In a gas turbine jet engine, the pressure of the incoming air is increased by flowing through a compressor; the air then enters a combustor that looks vaguely like a long can (sometimes called the combustion can). Fuel is injected in the combustor and burns with the air, and then the burned fuel-air mixture exits the combustor at a higher temperature than the air coming into the combustor.
