science In the philosophy of science and epistemology, the demarcation problem is the question of how to distinguish between science, and non-science. It examines the lines between science, pseudoscience, and other products of human activity, like art and literature, and beliefs. The debate continues after over two millennia of dialogue among

simple criterion that can be used to demarcate the boundaries of science.

The philosophy of science

The demarcation problem refers to the distinction between science and nonscience (including pseudoscience); Karl Popper called this the central question in the philosophy of science. []

Much of the philosophical literature connected with quantum theory centers on the problem of whether we should construe the theory, or a suitable extension or revision of it, in realist terms, and, if so, how this should be done. Various approaches to the “Measurement Problem” propose differing answers to these questions.
