by Janet Valade

PHP uses the setcookie() function to set new cookies and update existing cookies. Here's the basic format of the setcookie() function: >setcookie(name [, value] [, expire] [, path] [, domain] [, secure] [, httponly]) The only required parameter is the name of the cookie, although you'll almost always want to include a cookie value, too.

PHP - dummies

PHP is a very popular and widely-used open source server-side scripting language to write dynamically generated web pages. PHP was originally created by Rasmus Lerdorf in 1994. It was initially known as Personal Home Page. PHP scripts are executed on the server and the result is sent to the web browser as plain HTML.
