A few limit problems, like plug-and-chug problems, are very easy to solve. Just plug the arrow-number into the limit function, and if the computation results in a number, that's your answer (but see the following warning). For example, (Don't forget that for this method to work, the result you get after plugging in must be [...])

Plug and Chug 2.38 10 of 17 Acceleration: $a = F/m$ Revie TE Part A A simple rearrangement of Newton's second law gives $F = ma$. Find a net force that is needed to give a 14 kg package an acceleration of 7.4 m/s²? (Note: The units kg, m/s² and N are equivalent.) Express your answer to two significant figures and include the appropriate units. HA ?

Solved: . Plug And Chug 2.38 10 Of 17 Acceleration: $A = F ...$

It means "put something in and then do a bunch of manual effort to arrive at the result". I don't know where it came from; as a simple rhyme it was probably coined independently many times. Google Books cites it in a 1963 differential equations t...

Chapter 8 Plug & Chug Answers: Assuming that the 20 N force acts in the same direction that the object moves, $work = Fd = (20 \text{ N})(3.5 \text{ m}) = 70 \text{ J}$ (a) Since the 500 N force to lift the barbell is in the same direction that the barbell moves, $work = Fd = (500 \text{ N})(2.2 \text{ m}) = 1100 \text{ J}$. (b) After the barbell is lifted, its potential energy = the work done to lift it = 1100 Joules.
