Wallace and is sometimes referred to as the Wallace effect. The modern concept of reinforcement originates from Theodosius Dobzhansky. He envisioned a species separated allopatrically, where during secondar

Reinforcement (speciation) - Wikipedia

Minimum viable population (MVP), ecological threshold that specifies the smallest number of individuals in a species or population capable of persisting at a specific statistical probability level for a predetermined amount of time. Ecologists seek to understand how large populations must be in order to establish population-size benchmarks that help to keep species from going extinct.
