we must again find a good notion for the length or measure $m(E)$ of a fairly general subset $E \subset \mathbb{R}$, since $m(E) = \mathbb{R} \sim E$. 2 Set Theory and the Real Numbers The foundations of real analysis are given by set theory, and the notion of cardinality in set theory, as well as the axiom of choice, occur frequently in analysis.

From the point of view of strict logic, a rigorous course on real analysis should precede a course on calculus. Strict logic, is, however, overruled by both history and practicality. Historically, calculus, with its origins in the 17th century, came first, and made rapid progress on the basis of informal intuition.

k with $s_n \leq k$. Solution: True 3.A sequence f_n converges to s if and only if every subsequence f_{n_k} converges to s . Solution: True 4.A set K in a metric space $(X;d)$ is compact if and only if K is totally bounded and complete. Solution: True 5.If f_n is a sequence of nondecreasing real numbers that is bounded above, then $\lim_{n \rightarrow \infty} f_n = \sup f_n$...

found in a first-year graduate course in real analysis. Although the presentation is based on a modern treatment of measure and integration, it has not lost sight of the fact that the theory of functions of one real variable is the core of the subject. It is assumed that the student has had a solid course in Advanced Calculus. Although
