## **Nintendo Switch Consoles : Target**

A switch is a device in a computer network that connects other devices together. Multiple data cables are plugged into a switch to enable communication between different networked devices. Switches manage the flow of data across a network by transmitting a received network packet only to the one or more devices for which the packet is intended.

To check a condition in a script or function, use an If statement. The If statement can check many types of conditions, including the value of variables and the properties of objects. To check multiple conditions, use a Switch statement. The Switch statement is equivalent to a series of If statements, but it is simpler.
